

# no water green house 2019

15/07/2019

---

## no water in our green house

we have opted to draw water by the donkeys to refill one irrigation tank to irrigate two green houses with vegetables. it is not ease task also to water manually the sweet butter nut and water melons in he open field is using more water than drip irrigation through the pipe. we are doing this in a manual method which is laborious and trying.. in case some fund will be available it would be easier to fill 2 tanks by water boozer to run for at least 30 days.

the donkeys back brings in 280 litres of Sololo ramata dam water per day for 5 days.during weekend due to their workers offs there is no adequate workforce to the trips of fetching water by the donkeys kindly find the attached pictures for your visualization and comprehending the process
